

14 The Countersupport

Cat. No. 950
Description
Durable black plastic spool. Cast aluminum sides. Black phenolic board base with anti-slip abrasive for non-skid bottom.
Dimensions:
8.7" Width x 10.9" Length x 7.5" Height.

The Countersupport was originally designed for reduction and x-raying of supracondylar fractures of the femur. Now used for most all fractures of the shafts and condyles of the tibia and femur. Indispensable for emergency rooms and operating rooms, this is a simple gadget which every surgeon has planned to have his handyman make for him. And the toe holder is very grateful!

Method of x-raying: The countersupport is wide enough to accept 7" by 17" film cassette. Plastic spool translucent to x-ray.
